

# INTERNATIONAL COLLABORATION in Disaster Risk Reduction Related Activities

Disaster Management Centre of Sri Lanka has engaged in many disaster risk reduction and management related activities with several international collaborators. These collaborations have led to many internationally and nationally significant publications, broadening the knowledge of local scholars and practitioners

Online ISBN: 978-3-030-73003-1

Springer publishing

56 Chapters

This book presents a collection of papers under the theme of multi-hazard early warning and disaster risks. These were selected from the presentations made at the International Symposium on Tsunami and Multi-Hazard Risks, Early Warning and Community Awareness in supporting implementation of the Sendai Framework for Disaster Risk Reduction 2015-2030. This conference aimed to recognise achievements and to highlight work that still needs to be carried out. The conference promoted collaboration among academia, research institutions and disaster management offices, and further encouraged multidisciplinary and multi-sectoral interaction.

## Book Volume

Senaratne, R., Amaratunga, D., Mendis, S. & Athukorala, P (eds) (2021), COVID 19: Impact, Mitigation, Opportunities and Building Resilience "From Adversity to Serendipity", National Science Foundation, Sri Lanka ISBN 978-624-5896-00-4

This book considers the challenges of building disaster resilience in South Asia – a region that frequently experiences some of the most severe and devastating impacts of disasters.

In the course of combatting COVID-19, a wide range of lessons were learnt, many best practices were identified and new knowledge, insights, competencies and experiences were gained. They ought to be further studied, refined, analysed, interpreted and documented for the benefit of posterity. Against this backdrop, the National Science Foundation of Sri Lanka (NSF) has brought together all the key players of relevant public and private sector institutions to deliberate and reflect on the above aspects of the pandemic so as to build a robust and resilient community and economy in Sri Lanka.

The book offers a collective understanding of practices, which can offer global lessons to a world increasingly beset by disasters and with uncertain environmental futures. This landmark treatise will be valuable not only to Sri Lanka but also to the rest of the world in coping with and mitigating the impact of, such pandemics in the future.
